

Most parts of Somalia will remain dry in the next seven days, apart from some areas in Gedo, Bay, Middle Juba and Lower Juba regions, in the south where light to moderate rains are expected (Map 1 and 2). Moderate wet conditions are also expected in the Ethiopian highlands within the week. Other areas including Somaliland, Puntland and central regions will remain dry or receive minimal rains during the week.

River levels along the Juba and Shabelle Rivers continued to rise gradually but still remains below normal at this time of the year. The levels may increase further towards the end of the week with no risk of flooding.

Users are advised that this is a forecast and at times there may be discrepancies between estimates and actual amounts of rainfall received. Information on the forecast and observed river levels is updated daily and can be found on this link: <http://frrims.faoswalim.org>.

Map 1: 3 day cumulated rainfall forecast (08–10 April 2020)

Map 2: 7 day cumulated rainfall forecast (08–14 April 2020)
