

Somalia Rainfall Forecast

Issued: 21 September 2017

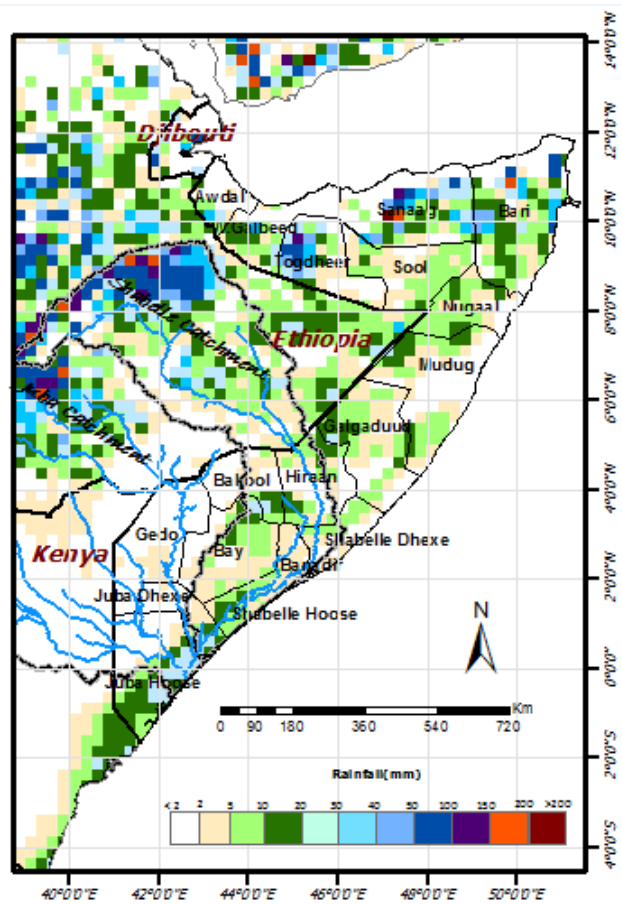

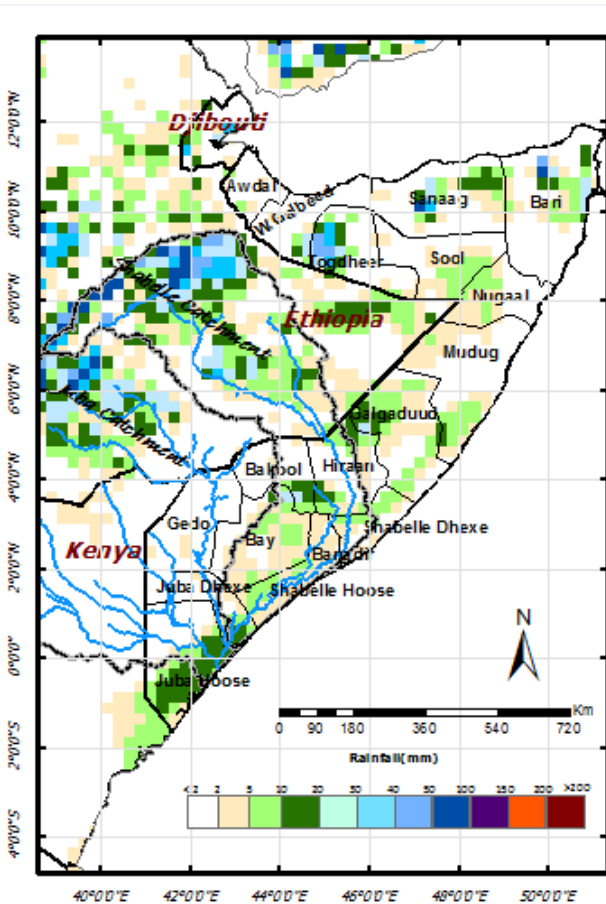

The three day cumulated rainfall forecast (Map 1) is pointing towards light to moderate rains in scattered areas of the country and this is expected to increase in quantity and space as the week progresses, given the one week forecast (Map 2). Light rains are also expected in the upper parts of Ethiopian highlands whose rainfall contribute significantly to the river flow in Somalia.

River levels in the middle reach of Shabelle are currently high with a high risk of flooding in Jowhar and its environs.

Users are advised that this is a forecast and at times there may be discrepancies between forecast and actual amounts of rainfall received. The forecast, observed river levels and rainfall amounts are updated on a daily basis and can be found on this link: <http://systems.fao.net/frims/>

Map 1: 3 days rainfall forecast (21 to 23 September 2017)

Map 2: 7-day cumulated rainfall forecast (21 to 27 September 2017)
